Subject: HHT 4300M EPA Testing
Attachments: HHT 4300 - All Runs - Signed.pdf

Dr. Sanchez,

This email is to inform you that, per a previously submitted 30-day notice, testing on the Hearth & Home Technologies 4300M wood stove was conducted during the week of May 13th. After a couple of tests that had to be invalidated for various reasons, and several valid tests with results that would not meet the applicable emission limit, the manufacturer elected to suspend testing. The appliance has been sealed in accordance with the CFR and returned to the manufacturer. Additionally, attached are test data sheets from all tests that were performed. I believe this meets all the requirements of data submission for suspended testing, please let me know if you require any additional documentation.

Best Regards,
